The Scurlock Studio and Black Washington

2009-01-07 Nearly a century's worth of Scurlock photographs combine to form a searing portrait of black Washington in all its guises—its challenges and its victories, its dignity and its determination. Beginning in the early twentieth century and continuing into the 1990s, Addison Scurlock, followed by his sons, Robert and George, used their cameras to document and celebrate a community unique in the world, and a stronghold in the history and culture of the nation's capital. Through photographs of formal weddings, elegant cotillions, ballet studios, and quiet family life, the Scurlocks revealed a world in which the black middle class refused to be defined or held captive by discrimination. From its home on the vibrant U Street corridor, the Scurlock Studio gave us indelible images of leaders and luminaries, of high society and working class, of Washingtonians at work and at play. In photograph after photograph, the Scurlocks captured an optimism and resiliency seldom seen in mainstream depictions of segregated society. Luminaries such as Duke Ellington, Ralph Bunche, Mary McLeod Bethune, Alain Locke, Martin Luther King, Jr., and Lois Mailou Jones testify to the intellectual and cultural vibrancy that was unique to Washington and an inspiration to the nation. Photographs of a Peoples Drugstore protest and Marian Anderson's Easter morning concert at the Lincoln Memorial remind us that the struggle for equality in black Washington began long before the civil rights movement of the 1960s. Offering a rich lens into

our past, The Scurlock Studio and Black Washington is a powerful trigger of personal and historical memory.

Our History Is the Future Nick Estes 2019-03-05 Winner of the Oakland "Blue Collar" PEN Award A work of history, a manifesto, and an intergenerational story of resistance that shows how two centuries of Indigenous struggle created the movement proclaiming "Water is Life" In 2016, a small protest encampment at the Standing Rock reservation in North Dakota, initially established to block construction of the Dakota Access oil pipeline, grew to be the largest Indigenous protest movement in the twenty-first century, attracting tens of thousands of Indigenous and non-Native allies from around the world. Its slogan "Mni Wiconi"—Water is Life—was about more than just a pipeline. Water Protectors knew this battle for Native sovereignty had already been fought many times before, and that, even after the encampment was gone, their anti-colonial struggle would continue. In *Our History is the Future*, Nick Estes traces traditions of Indigenous resistance leading to the #NoDAPL movement from the days of the Missouri River trading forts through the Indian Wars, the Pick-

Sloan dams, the American Indian Movement, and the campaign for Indigenous rights at the United Nations. While a historian by trade, Estes also draws on observations from the encampments and from growing up as a citizen of the Oceti Sakowin (the Nation of the Seven Council Fires), making *Our History is the Future* at once a work of history, a personal story, and a manifesto.

African American Historic Places National Register of Historic Places 1995-07-13 Culled from the records of the National Register of Historic Places, a roster of all types of significant properties across the United States, African American Historic Places includes over 800 places in 42 states and two U.S. territories that have played a role in black American history. Banks, cemeteries, clubs, colleges, forts, homes, hospitals, schools, and shops are but a few of the types of sites explored in this volume, which is an invaluable reference guide for researchers, historians, preservationists, and anyone interested in African American culture. Also included are eight insightful essays on the African American experience, from migration to the role of women, from the Harlem Renaissance to the Civil Rights Movement. The authors represent academia, museums, historic preservation, and politics, and utilize the listed properties to vividly illustrate the role of communities and women, the forces of migration, the influence of the arts and heritage preservation, and the struggles for freedom and civil rights. Together they lead to a better understanding of the contributions of African Americans to American history. They illustrate the events and people, the designs and achievements that define African American history. And they pay powerful tribute to the spirit of black America.

Big Farms Make Big Flu Rob Wallace 2016-06-30

The first collection to explore infectious disease,

agriculture, economics, and the nature of science together. Thanks to breakthroughs in production and food science, agribusiness has been able to devise new ways to grow more food and get it more places more quickly. There is no shortage of news items on hundreds of thousands of hybrid poultry—each animal genetically identical to the next—packed together in megabarns, grown out in a matter of months, then slaughtered, processed and shipped to the other side of the globe. Less well known are the deadly pathogens mutating in, and emerging out of, these specialized agro-environments. In fact, many of the most dangerous new diseases in humans can be traced back to such food systems, among them *Campylobacter*, Nipah virus, Q fever, hepatitis E, and a variety of novel influenza variants.

Agribusiness has known for decades that packing thousands of birds or livestock together results in a monoculture that selects for such disease. But market economics doesn't punish the companies for growing Big Flu—it punishes animals, the environment, consumers, and contract farmers.

Alongside growing profits, diseases are permitted to emerge, evolve, and spread with little check.

“That is,” writes evolutionary biologist Rob Wallace, “it pays to produce a pathogen that could kill a billion people.” In *Big Farms Make Big Flu*, a collection of dispatches by turns harrowing and thought-provoking, Wallace tracks the ways influenza and other pathogens emerge from an agriculture controlled by multinational corporations. Wallace details, with a precise and radical wit, the latest in the science of agricultural epidemiology, while at the same time juxtaposing ghastly phenomena such as attempts at producing featherless chickens, microbial time travel, and neoliberal Ebola. Wallace also offers sensible alternatives to lethal agribusiness. Some, such as farming cooperatives, integrated pathogen management, and mixed crop-livestock systems, are already in practice off the agribusiness grid.

While many books cover facets of food or outbreaks, Wallace's collection appears the first to explore infectious disease, agriculture, economics and the nature of science together. *Big Farms Make Big Flu* integrates the political economies of disease and science to derive a new

understanding of the evolution of infections. Highly capitalized agriculture may be farming pathogens as much as chickens or corn.

Elementary Statistics Mario F. Triola 1997-08 Addison-Wesley is proud to celebrate the Tenth Edition of Elementary Statistics.& This text is highly regarded because of its engaging and understandable introduction to statistics. The&author's commitment to providing student-friendly guidance through the material and giving students opportunities to apply their newly learned skills in a real-world context has made Elementary Statistics the #1 best-seller in the market.

Reinforcement Learning, second edition Richard S. Sutton 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence.

Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an

agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Dangerous Science Daniel J. Rozell 2020-02-04
Downloaded from bracketcloud.com on 2022-06-30 by guest

The public is generally enthusiastic about the latest science and technology, but sometimes research threatens the physical safety or ethical norms of society. When this happens, scientists and engineers can find themselves unprepared in the midst of an intense science policy debate. In the absence of convincing evidence, technological optimists and skeptics struggle to find common values on which to build consensus. The best way to avoid these situations is to sidestep the instigating controversy by using a broad risk-benefit assessment as a risk exploration tool to help scientists and engineers design experiments and technologies that accomplish intended goals while avoiding physical or moral dangers. Dangerous Science explores the intersection of science policy and risk analysis to detail failures in current science policy practices and what can be done to help minimize the negative impacts of science and technology on society.

Machine Learning: ECML 2004 Jean-Francois Boulicaut 2004-11-05 The proceedings of ECML/PKDD 2004 are published in two separate, albeit - tertwined, volumes: the Proceedings of the 15th European Conference on Machine Learning (LNAI 3201) and the Proceedings of the 8th European Conference on Principles and Practice of Knowledge Discovery in Databases (LNAI 3202). The two conferences were co-located in Pisa, Tuscany, Italy during September 20-24, 2004. It was the fourth time in a row that ECML and PKDD were co-located. - ter the successful co-

locations in Freiburg (2001), Helsinki (2002), and Cavtat- Dubrovnik (2003), it became clear that researchers strongly supported the organization of a major scientific event about machine learning and data mining in Europe. We are happy to provide some statistics about the conferences. 581 different papers were submitted to ECML/PKDD (about a 75% increase over 2003); 280 were submitted to ECML 2004 only, 194 were submitted to PKDD 2004 only, and 107 were submitted to both. Around half of the authors for submitted papers are from outside Europe, which is a clear indicator of the increasing attractiveness of ECML/PKDD. The Program Committee members were deeply involved in what turned out to be a highly competitive selection process. We assigned each paper to 3 - viewers, deciding on the appropriate PC for papers submitted to both ECML and PKDD. As a result, ECML PC members reviewed 312 papers and PKDD PC members reviewed 269 papers. We accepted for publication regular papers (45 for ECML 2004 and 39 for PKDD 2004) and short papers that were associated with poster presentations (6 for ECML 2004 and 9 for PKDD 2004). The global acceptance rate was 14.5% for regular papers (17% if we include the short papers).

Community-Based Transformational Learning Christian Winterbottom 2021-12-30 Rooted in the work of community - school collaborations, this text focuses on connecting the rigors of the classroom with the ambiguity of lived community experience. Community-Based Transformational Learning (CBTL) draws on the increasing evidence that course-learning conducted in an applied, community setting, can positively transform students' professional and personal identity and creates new ways of thinking and working in university courses and pre-professional experiences. To illustrate the different ways to successfully implement community-based learning, examples are provided of experiences integrated in courses across multiple disciplines across an American university whose mission is

focused on teaching. Topics covered include refugee and immigration transition issues, incarceration and health needs with international examples of community experiences from Jamaica, Korea and Belize. Qualitative and quantitative data depict how these experiences impact students and each chapter presents how community engagement has been established as an effective approach in the different disciplines, including computer science and sports management. The authors demonstrate how CBTL experiences can be transformative when students are provided a chance to connect the academic commitment to community aims, but also provides suggestions for overcoming challenges and pitfalls in developing these experiences.

Lais of Marie De France Marie de France ** A Christian Classic ** ** Active Table of Contents ** This book comes complete with a Touch-or-Click Table of Contents, divided by each section. The Lais of Marie de France are a series of twelve short narrative Breton lais by the poet Marie de France. They are written in the Anglo-Norman and were probably composed in the late 12th century. The short, narrative poems generally focus on glorifying the concept of courtly love through the adventures of their main characters. Despite her stature in Anglo-Norman literature and medieval French literature generally, little is known of Marie herself, though it is thought that she was born in France and wrote in England. Marie de France's lais, told in octosyllabic, or eight syllable verse, are notable for their celebration of love, individuality of character, and vividness of description - hallmarks of the emerging literature of the times. Five different manuscripts contain one or more of the lais, but only one, Harley 978, a thirteenth century manuscript housed in the British Library, preserves all twelve. It has been suggested that if the author had indeed arranged the Lais as presented in Harley 978, that she may have chosen this overall structure to contrast the positive and negative actions that can result from love. In this manuscript, the odd lais — "Guigemar," "Le Fresne," etc. — praise the characters who express love for other people. By comparison, the even lais, such as "Equitan," "Bisclavret" and so on, warn how love that is limited to oneself can lead to misfortune. The Harley 978 manuscript also includes a 56-line prologue in which Marie describes the impetus for her composition of the lais. In the prologue, Marie

writes that she was inspired by the example of the ancient Greeks and Romans to create something that would be both entertaining and morally instructive. She also states her desire to preserve for posterity the tales that she has heard. Two of Marie's lais - "Lanval," a very popular work that was adapted several times over the years (including the Middle English Sir Launfal), and "Chevrefoil" ("The Honeysuckle"), a short composition about Tristan and Iseult - mention King Arthur and his Knights of the Round Table. Marie's lais were precursors to later works on the subject, and Marie was probably a contemporary of Chrétien de Troyes, another writer of Arthurian tales. You can buy other wonderful religious books from Wyatt North Publishing! Enjoy.

An Introduction to Genetic Algorithms Melanie Mitchell 1998-03-02 Genetic algorithms have been used in science and engineering as adaptive algorithms for solving practical problems and as computational models of natural evolutionary systems. This brief, accessible introduction describes some of the most interesting research in the field and also enables readers to implement and experiment with genetic algorithms on their own. It focuses in depth on a small set of important and interesting topics—particularly in machine learning, scientific modeling, and artificial life—and reviews a broad span of research, including the work of Mitchell and her colleagues. The descriptions of applications and modeling projects stretch beyond the strict boundaries of computer science to include dynamical systems theory, game theory, molecular biology, ecology, evolutionary biology, and population genetics, underscoring the exciting "general purpose" nature of genetic algorithms as search methods that can be employed across disciplines. An Introduction to Genetic Algorithms is accessible to students and researchers in any scientific discipline. It includes many thought and computer exercises that build on and reinforce the reader's understanding of the text. The first

chapter introduces genetic algorithms and their terminology and describes two provocative applications in detail. The second and third chapters look at the use of genetic algorithms in machine learning (computer programs, data analysis and prediction, neural networks) and in scientific models (interactions among learning, evolution, and culture; sexual selection; ecosystems; evolutionary activity). Several approaches to the theory of genetic algorithms are discussed in depth in the fourth chapter. The fifth chapter takes up implementation, and the last chapter poses some currently unanswered questions and surveys prospects for the future of evolutionary computation.

The Invention of the Beautiful Game Gregg Bocketti 2019-02-08 “Beautifully researched and engagingly told, this book captures the bitter conflicts and surprising continuities that marked the emergence of a national style in Brazil as it tells the story of the men and women who, despite their many differences, together created ‘the beautiful game.’” —Roger Kittleson, author of *The Country of Football: Soccer and the Making of Modern Brazil* “Compellingly shows how each segment of Brazilian society—players, club owners, and spectators, especially the usually neglected female fans—was touched by the sport that it eventually came to proudly embrace as its own.” —Amy Chazkel, coeditor of *The Rio de Janeiro Reader: History, Culture, Politics* “Highlights the narrative power of soccer, showing how Brazilians—from elite sportsmen and nationalist intellectuals to common men and women—infused the sport with both personal and national importance.” —Joshua Nadel, author of *Fútbol!: Why Soccer Matters in Latin America* Although the popular history of Brazilian football narrates a story of progress toward democracy and inclusion, it does not match the actual historical record. Instead, football can be understood as an invention of early twentieth century middle-class and wealthy Brazilians who called themselves “sportsmen” and nationalists, and used the sport as part of their larger campaigns to shape and reshape the nation. In this cross-cutting cultural history, Gregg Bocketti traces the origins of football in Brazil from its

elitist, Eurocentric identity as “foot-ball” at the end of the nineteenth century to its subsequent mythologization as the specifically Brazilian “futebol,” o jogo bonito (the beautiful game). Bocketti examines the popular depictions of the sport as having evolved from a white elite pastime to an integral part of Brazil’s national identity known for its passion and creativity, and concludes that these mythologized narratives have obscured many of the complexities and the continuities of the history of football and of Brazil. Mining a rich trove of sources, including contemporary sports journalism, archives of Brazilian soccer clubs, and British ministry records, and looking in detail at soccer’s effect on all parts of Brazilian society, Bocketti shows how important the sport is to an understanding of Brazilian nationalism and nation building in the late nineteenth and early twentieth centuries.

Idaho State Parks Rick Just 2017 Idaho's state parks have been called the "jewels" of the Gem State. The story of how those jewels came to be involves political intrigue, much resistance, some philanthropy, and a touch of irony. Sen. Weldon B. Heyburn famously said that state parks were "always a political embarrassment." Idaho's first state park was named after him. Today, Idaho's 30 state parks host five million people a year. Visitors come to boat, camp, bike, climb, hike, fish, and make memories in the great outdoors. This book tells the story of Idaho's diverse state parks--from Priest Lake in Idaho's panhandle to Bear Lake in the southeast corner of the state--through a wealth of historical photographs. A variety of parks are featured, including ones that were lost, found, or never came to fruition.

The Price of Government David Osborne 2009-04-29 Government is broke. The 2004 federal deficit is the highest in U.S. history. The states have suffered three years of record shortfalls. Cities, counties, and school districts are laying off policemen and teachers, closing schools, and cutting services. But the fiscal pain won't go away, and the bankrupt ideologies of left and right offer little guidance. *The Price of Government* presents a radically different approach to budgeting—one that focuses on buying results for citizens rather than cutting or adding to last year's spending programs. It advocates consolidation, competition, customer choice, and a relentless focus on results to save millions while improving public services.
