Ethical Discourse in Finance Marizah Minhat 2021-10-25 Ethical discourse is commonly not a priority in a conventional finance syllabus. Moral sentiments often take a back seat to market sentiments, even in shaping the direction of ethical finance business. This anomaly persists despite growing interest in ethical finance. Taking an interdisciplinary and diverse perspective, this book enriches the evolving definition and scope of ethical finance literature by focusing on actors, products and regulation that shape markets. Considering the gap between theory and practice, this book bridges academic and professional knowledge in unpacking ethical and governance issues in the financial industry. In an effort to include as many viewpoints as possible, regardless of popularity or who holds them, the book editors gathered thoughts from diverse fields, including accounting, economics, ethics, finance, governance, law, management, philosophy and religion. Appealing to academic and non-academic stakeholders with an interest in ethics and

finance, this book is the result of and a testament to a distinct educational and public engagement project that included different generations and communities, for future reference.

The material is contained in more than 500 datasheet articles, each devoted exclusively to one particular alloy, a proven format first used in the complementary guide for irons and steels. For even more convenience, the datasheets are arranged by alloy groups: nickel, aluminum, copper, magnesium, titanium, zinc and superalloys. The book provides very worthwhile and practical information in such areas as: compositions, trade names, common names, specifications (both U.S. and foreign), available products forms, typical applications, and properties (mechanical, fabricating, and selected others). This comprehensive resource also covers the more uncommon alloys by groups in the same datasheet format. Included are: refractory metals and alloys (molybdenum, tungsten, niobium, tantalum), beryllium copper alloys, cast and P/M titanium parts, P/M aluminum parts, lead and lead alloys, tin-rich alloys, and sintering copper-base materials (copper-tin, bronze, brass, nickel silvers).
