The Last Knight Pierre Terjanian 2019-10-02 Maximilian I (1459-1519) skillfully crafted a public persona and personal mythology that eventually earned him the romantic sobriquet "Last Knight." From the time he became duke of Burgundy at the age of eighteen until his death, his passion for the trappings and ideals of knighthood served his worldly ambitions, imaginative strategies, and resolute efforts to forge a legacy. A master of self-promotion, he ordered exceptional armor from the most celebrated armorers in Europe, as well as heroic autobiographical epics and lavish designs for prints. Indeed, Maximilian's quest to secure his memory and expand his sphere of influence, despite chronic shortages of funds that left many of his most ambitious projects unfinished, was indomitable. Coinciding with the 500th anniversary of Maximilian's death, this catalogue is the first to examine the masterworks that he commissioned, revealing how art and armor contributed to the construction of Maximilian's identity and aspirations, and to the politics of Europe at the dawn of the Renaissance. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 14.0px Verdana}

The Bounded and Precise Word Problems for Presentations of Groups S. V. Ivanov

2020-05-13 The author introduces and studies the bounded word problem and the precise word problem for groups given by means of generators and defining relations. For example, for every finitely presented group, the bounded word problem is in NP, i.e., it can be solved in nondeterministic polynomial time, and the precise word problem is in PSPACE, i.e., it can be solved in polynomial space. The main technical result of the paper states that, for certain finite presentations of groups, which include the Baumslag-Solitar one-relator groups and free products of cyclic groups, the bounded word problem and the precise word problem can be solved in polylogarithmic space. As consequences of developed techniques that can be described as calculus of brackets, the author obtains polylogarithmic space bounds for the computational complexity of the diagram problem for free groups, for the width problem for elements of free groups, and for computation of the area defined by polygonal singular closed curves in the plane. The author also obtains polynomial time bounds for these problems.

Special Developments 2016-07-01 Bob just made the discovery of the century; it's about your five-year-old. Well-to-do dreamer Bob Rogers, convinced of the human mind's vast, untapped potential, develops a method of testing young children for a variety of extraordinary abilities. He is then shocked to discover that several such abilities not only do exist, but they are also far more commonplace than he ever could have imagined. To learn more about these newly discovered skills, he dedicates his wealth to the organization of school wherein the practice and development of the children's various abilities can be both encouraged and observed. Bob soon realizes that his young students and their parents must keep quiet about these special powers, both

to shelter the children from those who might cause them to doubt their developing abilities, and to protect them from those who might exploit them.

Wilton House John Martin Robinson 2021-03-16
An unprecedented tour through the rich interiors and magnificent collections of one of the great houses of the English country landscape, and a treasure of British architectural heritage. Wilton House in Salisbury, England, has been the ancestral home of the Earl of Pembroke for nearly 500 years and boasts one of the most fascinating and varied histories of all Britain's historic houses. Shaped over centuries by the most significant names in architecture and interior design, Wilton is known as the finest example of Palladian architecture in England, with interiors by Inigo Jones and John Webb, furniture by William Kent and Thomas Chippendale, and unparalleled collections of both classical sculpture and Old Master paintings--with masterpieces by Raphael, Titian, Rembrandt, and Tintoretto among its rooms. The book explores the development of the house and its collections, from the Van Dyck paintings in Jones's remarkable Single and Double Cube state rooms to the Arundel marbles housed in James Wyatt's Gothic-revival cloisters. With a foreword by the Earl of Pembroke, a revelatory text by the historian John Martin Robinson, and imagery drawn both from Wilton's private archives and from eminent architectural and interiors photographers, this book lifts the veil on Wilton House and its remarkable history.

Strategic Collaboration in Public and Nonprofit Administration Dorothy Norris-Tirrell 2017-09-25
Market disruptions, climate change, and health pandemics lead the growing list of challenges faced by today's leaders. These issues, along with countless others that do not make the daily news, require novel thinking and collaborative action to find workable solutions. However, many administrators stumble into collaboration without a strategic orientation.

Using a practitioner-oriented style, *Strategic Collaboration in Public and Nonprofit Administration: A Practice-Based Approach to Solving Shared Problems* provides guidance on how to collaborate more effectively, with less frustration and better results. The authors articulate an approach that takes advantage of windows of opportunity for real problem solving; brings multi-disciplinary participants to the table to engage more systematically in planning, analysis, decision making, and implementation; breaks down barriers to change; and ultimately, lays the foundation for new thinking and acting. They incorporate knowledge gained from organization and collaboration management research and personal experience to create a fresh approach to collaboration practice that highlights: Collaboration Lifecycle Model Metric for determining why and when to collaborate Set of principles that distinguish Strategic Collaboration Practice Overall Framework of Strategic Collaboration Linking collaboration theory to effective practice, this book offers essential advice that fosters shared understanding, creative answers, and transformation results through strategic collaborative action. With an emphasis on application, it uses scenarios, real-world cases, tables, figures, tools, and checklists to highlight key points. The appendix includes supplemental resources such as collaboration operating guidelines, a meeting checklist, and a collaboration literature review to help public and nonprofit managers successfully convene, administer, and lead collaboration. The book presents a framework for engaging in collaboration in a way that stretches current thinking and advances public service practice.

[A Unified Approach to Structural Limits and Limits of Graphs with Bounded Tree-Depth](#)
 Jaroslav Nešetřil 2020-04-03 In this paper the authors introduce a general framework for the

study of limits of relational structures and graphs in particular, which is based on a combination of model theory and (functional) analysis. The authors show how the various approaches to graph limits fit to this framework and that the authors naturally appear as “tractable cases” of a general theory. As an outcome of this, the authors provide extensions of known results. The authors believe that this puts these into a broader context. The second part of the paper is devoted to the study of sparse structures. First, the authors consider limits of structures with bounded diameter connected components and prove that in this case the convergence can be “almost” studied component-wise. They also propose the structure of limit objects for convergent sequences of sparse structures. Eventually, they consider the specific case of limits of colored rooted trees with bounded height and of graphs with bounded tree-depth, motivated by their role as “elementary bricks” these graphs play in decompositions of sparse graphs, and give an explicit construction of a limit object in this case. This limit object is a graph built on a standard probability space with the property that every first-order definable set of tuples is measurable. This is an example of the general concept of modeling the authors introduce here. Their example is also the first “intermediate class” with explicitly defined limit structures where the inverse problem has been solved.

My Chess World David Navara 2020-07-14 This book is not a pure (auto)biography, rather a games collection. It consists mainly of interesting high-class games played by me, including many losses. Most of the games are preceded by accompanying texts, which vary from essays to tournament reports. The title of the book might seem presumptuous, but I wanted to show how I see or experience the competitions without denying the chess worlds of others. While the texts are mostly light and subjective, at the same time I tried hard to stick to the facts and provide some food for thought. GM David Navara May 2020.
